### What's New In Intype?

- Navigator Bar: Now you can easily control the process of opening or closing of buffers in a project via the Navigator bar
- Updated for Font Awesome
- Bug Fixes

The latest version of Intype has been released and we're pleased to announce that it is free. For the last time, a free version of Intype is available for download. What's New in This Release:

- Now you can update not just one but a whole list of project files at once without the need to do it manually.
- The traditional window positions are now fully customizable via the options.
- The File Explorer has also been improved.
- In addition to the aforementioned, you can now change the language of the syntax highlighter for HTML, JS and CSS.
- Bug Fixes

This version has added new features, fixed a few bugs and improved the system performance. Programming is fully responsible for the way you interact with a computer. A large variety of different languages can be used, some specialized for website construction, others oriented towards offline usage. The code can be written even in a plain text file but applications like Intype provide a lot more support and ease of access for an enhanced workflow. Simple, straightforward design The whole setup process only takes a little of your time and if you happen to find the application suitable for your work style it can also be found as a portable version. System resources used are amongst the least of your concern, being able to run on most configurations. In terms of visuals, the first impact is rather surprising, with little other than a large input area and menu bar displayed. This doesn't make the application obsolete, or packed with a few features, but these can easily be accessed either through hotkeys or corresponding menu entries. Syntax highlighter and file support Amongst the first features of interest when it comes to a powerful text editor is file support, and this application lives up to expectations. As such, either by dragging them over the main window or using the open dialog, you can load formats like C, HTML, JS, JSON, LESS, PL, PM, PY, REGEXP, RB, RBX, SQL, XML and a lot more. Needless to say that the same number is available when saving projects. However, good file support is

not enough, with the application continuing to prove it means business. In order to easily identify code, a built-in syntax highlighter for makes sure expressions and functions are colored differently, depending on the selected language to use. You can pick the language from a drop-down menu where you also find different encoding options like ANSI or several UTF specifications
